## Resetting the clock on your Samsung Phone System

To reset the clock, follow these steps:

1. Hit the "Transfer" or "**TRSF**" button.
2. Key in the number **200**. (This tells it you wish to log in.)
3. It now requires a password. Enter **1234**.
4. Press the number **1** to enable.
5. Hit the speaker or "**SPK**" button to continue.
6. Now, the screen will show:

```
201: CUS. PASSCODE  
SELECT PROG. II
```

If that's what you see, then type in **505**

7. Now, the screen will show two lines, one is "OLD" the other "NEW". The first, "OLD" line shows the current settings for date and time. The first digit is the day of the week (with 1 as Monday). So, if you wanted to set Monday, July 4, 2005 as the current date and it was 2:00pm, you would key in:

1070405:1400 (You don't have to dial the colon)

There is no backspace, so if you misdial just keep dialling until the end of the line, then dial 505 again and start over.

8. When you're done, hit the **TRSF** button again.

All done! If you have any problems at all, just give us a call.
